

THE RANCHTECH® BLADE ADVANTAGE

Blades that cut, not tear, and keep cutting for 35,000+ acres.

35,000+
acre blade life, forged alloy

Lifetime
warranty against blade breakage

10"+
soil fracture below the surface

2–3"
blade depth: truly no-till

RanchTech 6" blades have a beveled, tapered edge that sharpens with use. The forged alloy gives each blade a lifespan of 35,000+ acres.

The wide, sharp blades are set in a spiral, so the weight of the aerator cuts the root system instead of tearing it. Because the blades are truly no-till, pastures respond quickly.

Paired with a RanchWorx aerator, RanchTech blades let water and nutrients reach the roots, where your grass can use them.

Shallow blades, deep results: the impact fractures compacted ground well below the cut.

CUSTOMER RESULT

Mr. Roady in Oklahoma left about 20 acres of his hayfield un-aerated. The aerated ground made **5½ rolls per acre**; the ground he skipped made about 3.

BLADE OPTIONS

8" RanchTech Pasture Blades	Upgrade from 6" standard
7" RanchTech® Turf Blades	Instead of 6" (new purchase only)

PRODUCT OPTIONS

Get more from every pass.

Every RanchWorx aerator can pull a second implement, such as a RanchWorx HD land roller, a harrow or a sprayer, on the same trip. Fewer passes mean less fuel, less time and more forage from your fields.

Broadcast & seeding

Add a hydraulic seeder/spreader and spread seed while the blades open the ground. Every package also mounts on your tractor's 3-point hitch to run without the aerator.

PACKAGE	HOPPER	FITS
Hydraulic Spreader	9.6 bushel	30" & 36" SC, DA
Hydraulic Spreader	16 bushel	30" & 36" SC, DA
HD Hydraulic Spreader	32 bushel	DA

All packages are 3-point mounted, with a ladder and expanded-metal walkway for refilling in the field.

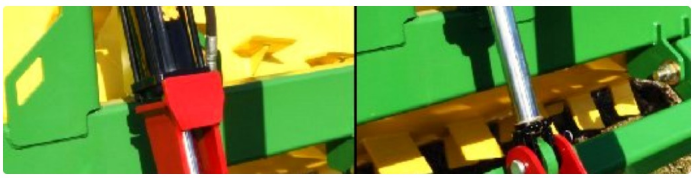

Seeder package with ladder and walkway. More at ranchworx.com/overseeding

Rear drawbar hitches

SC, SL Series Removable Drawbar	Harrow
Basic Drag Plate	
DA Series Standard Drawbar	
DA Series HD Strutted Drawbar	Harrow, no-till drill

Cylinder stop option

Catches the aerator if a cylinder or hose fails, for added reliability and peace of mind. Flip it up for transport; lower it and leave it in place when it isn't needed.
