PASTURE AERATORS

# LAND ROLLERS

## BUILT FOR RESULTS OVERBUILT TO LAST

When size, weight and durability matters, turn to a RanchWorx® Series Land Roller. We have taken our expertise from building the most durable and efficient Soil Aerators and adapted it to our Land Roller series. Whether it is for road-building, land sculpting, reclamation, sod production or agricultural use, we have a roller that can handle it. With drum diameters up to 72", a RanchWorx® Land Roller can fit any application.

Our drum wall thickness ranges from ½" to 1" thick, so the RanchWorx® Land Roller is the last roller you will ever need. The massive inherent weight of our large drum diameter allows for increased lbs/ft of ground pressure with our drums water holding capacity. Being able to ballast the drum to the appropriate weight for the soil types and conditions will maximize the versatility of the RanchWorx® Land Roller.

Contact the RanchWorx® sales team to ensure you get the exact roller that best fits your application. Custom sizes and configurations are available upon request.
